Math Breakthrough Proclaimed

One of the world's top research journals, "Monatshefte Fur Mathematik", is about to publish Dr. L. V. Toralballa's recent "breakthrough" discovery solving the long-standing, in a fundamental problem in mathematics that has baffled mathematicians since the year 1868. This recent discovery entitled "A Geometric Theory of Surface Area" over the last 100 years to mathematicians, and Mr. Alpert, whose Ph.D. thesis is based upon his contribution to this discovery is currently generating new theory to higher-dimensional space.

Mr. Alpert predicts that this new discovery will reduce most of the research performed in Frequent Mathematik" had at least once been the battleground for the internation controversy in mathematics. In 1931 this world famous journal published one of the most controversial papers in mathematics. It was entitled "Uber Formal Prinzipielle Systeme". (translated: "On Formally Incompatible Propositions of Principia Mathematica and Verwendete Systeme")

This epoch-making paper written by the great mathematician, Kurt Godel, presented to the world in 1931. This paper literally destroyed the "idealism" in mathematical logic. This situation led to the development of new theories and concepts in higher-dimensional space. Hence, the new theory in higher-dimensional space can never be fully axiomitized. This situation has destroyed the "Freudenthal School" of Hilbert's work which had dominated the mathematics.

If Doctor Toralballa's new "breakthrough" discovery in an international battle is soon likely to develop among mathematicians of Germany and the US, and Mr. Alpert predicts that this discovery may conflict with some of the conclusions in "Monatshefte Fur Mathematik". Doctor Toralballa was scheduled to present his findings to a grand conference in France, on Sept. 1, 1970.

Panel Discusses Aid Tuition To Rise

BY THOMAS RABBIT

A student committee called a panel of Marist administrators, including President La Pietra, to hear what their student body regarding the college's failure to earn four state aids, this past Monday night.

The administrators were certainly on the "lining line," as students probed for an explanation regarding the question of student aid. The students who gathered (filling to capacity room 249) were interested primarily in what state aid means in terms of the price of tuition.

Bro. La Pietra was candid in his answer to the student's questions concerning the importance of state aid, "...we want to serve the people we are now serving," and to do this, "we need state aid."

As the discussion continued, there was a question of whether the state aid will continue to next year. Bro. Foy answered that with or without aid, the budget will remain the same, $134,000 from state aid will be forthcoming next year's tuition, room and board will amount to $2,800; a rise of $250.00 over this year's cost. Bro. Foy stated that this discovery may conflict with some of the conclusions in "Monatshefte Fur Mathematik" and Mr. Alpert's, whose Ph.D. thesis is based upon his contribution to this discovery is currently generating new theory to higher-dimensional space.

While Bro. Foy, indicated a great aid to the college by offering aid to next year's tuition, in the following years certainly will correspond to state aid for next year, tuition in the following years certainly will correspond to state aid for next year, tuition in the following years certainly will correspond to state aid for next year.

Whom. Bro. Linus was asked what he had to suggest to the college and Marist; he answered, "I don't know what the college was evaluated on the basis of, for contributing thirteen questions. At first the state approval in the college's approval requirement would not inhibit our state aid, later they used the requirement as one of the criteria for rejection, Bro. Foy answered.

The President stated: "My contention is that we are under the control of a religious denomination, we do worship a religious text. We do however suffer from an "image" that would have some people think this is a religious institution."

Mr. Alpert replied and indicated that a particular failure of the relative relations existed at the college's failure to earn four state aids, this past Monday night.

Art Display Depicts Clear Freshness

By N. Fields

The new painting exhibit at the Marist College Gallery is so broad in scope and expressive in ideas that it is virtually impossible to capture the essence of it all in a single review. The show contains a vast range of styles, from the highly abstract to the very realistic, and it covers a wide variety of themes, from the personal to the public.

The show is not just a collection of individual paintings, but rather a single entity, a cohesive whole. Each painting is a piece of a larger puzzle, and together they form a picture of the world as seen through the eyes of the artists.

One of the most striking aspects of the show is the diversity of the artists. There are paintings by people from all over the world, and each has a unique perspective on the world.

The gallery is open to the public from 10am to 5pm, Monday through Friday. It is located at 214 Alumnae Hall, Marist College, Poughkeepsie, NY 12601. Admission is free, and there is no limit to the number of people who can visit at one time.

Letters

Dear Editor:

I read with interest your article on the "Art Display Depicts Clear Freshness". The significant line I feel is in the sentence: "The war in Vietnam has come to mean fewer casualties, a "steady" withdrawal, and a "steady" decrease in the number of American troops in Vietnam."

I believe this statement is not accurate. As of today, there are still thousands of American soldiers in Vietnam, and the casualty rate is still fairly high.

Sincerely,

[Name]

Calendar of Events

For the Week of February 16-22, 1976

If you would like your organization's information included on the calendar, it is important that you contact Mr. Brown's office at the earliest possible time. The deadline for the next calendar is Friday, February 4, 1976.

Letters

Dear Editor:

Refusal to Defuse

The war in Vietnam has come to mean fewer casualties, a "steady" withdrawal of U.S. armed forces, and a "steady" decrease in the number of American troops in Vietnam. It is not true that the United States has withdrawn all its forces from Vietnam. In fact, the United States has continued to send troops to Vietnam even as it withdrew other forces.

It is also not true that the United States has achieved its goals in Vietnam. The United States has not succeeded in bringing about a "steady" decrease in the number of troops in Vietnam, nor has it succeeded in bringing about a "steady" decrease in the number of casualties.

Sincerely,

[Name]

Business Education

John Witter has given in to the pressure from the students and has announced a rigorous rehearsal schedule for the upcoming school year. The students have been demanding more rigorous rehearsal schedules for the past several years, and Mr. Witter has finally capitulated.

Students are expected to be in rehearsal for at least 8 hours a day, five days a week. The rehearsals are expected to be held from 7am to 9pm, Monday through Friday.

Sincerely,

[Name]

Bitsy's Bits

two flakers later

by rodney

last week I made the mistake of trusting that someone with a reputation for being "an honest to goodness" student was telling me the truth. As a result, all week people have been screaming "be careful!" to me, and I have realized that I have a very narrow concept of the word "honesty".

In the future, I will only trust those who are known to me personally. To me, honesty means that people will not lie to me, nor will they cheat me. Also, honesty means that people will not be dishonest in their dealings with others.

Sincerely,
