Internship position is rejected

By Dave Powers

A $40,000 proposal calling for the creation of a new internship position has been rejected by the administration, the Circle has learned. The proposal, three fourths of which was to be funded by the Title III Grant and the other $10,000 coming from Marist was officially scrapped last December 10th in a memo from President Murray.

The proposal, originated in the summer of 1978, by Business teacher Jake Maness, then Career Placement Activity Director for Title III, called for the institution of a Career Development Director. According to the proposal, the director would supervise an Internship Coordinator, a Placement Coordinator, (supported by Marist), two part-time Career Counselors, and a part-time secretary all to be supported by Title III.

However, according to Director of Career Development and Placement, Pat Lennahan, Marist's original proposal was accepted by the Title III Office and the Career Placement Task Force. The main criticism of the proposal was the elimination of the coordinator's function and the promotion of the Internship position. This director would be responsible for reporting to the Administration. According to Lennahan, the proposal was then resubmitted to then president Linnell Foy and forwarded to Washington in December of 1978. The revised proposal was formally approved in January of 1979 and the position of director was to be filled by May 1st.

However, the job search was delayed due to administrative changes according to Lennahan. According to Dean of Students, Gerald G. Higgins, the administration, in the midst of a reshuffling of duties, decided to change the administrative level and salary in order to lure someone with more credibility, who had considerable experience in the area.

The salary was raised up to $18,000-$20,000 dollars per year.

On June 27th, a memo from the Personnel Office advertised the opening for the Director of Internships position. The job description stated that he/she would coordinate, develop, and expand the College’s Internship program including placements, develop and conduct workshops on career planning, experiential learning, and provide the base for a program in cooperative education.

The first job search conducted in July, chaired by John Lakhobou and Larry Cox, produced two viable candidates. One a professor at Marist, the other a psychiatric registration turned down the job offer because the salary was too low. The other person, someone outside the Marist community, according to Cox turned down the job, deciding to continue work on his doctorate. Again, in late August, Marist advertised for the director’s position and interviews were to be chaired by Assistant Dean of Students Gerald Kelly who has inherited the supervision of the director’s position in Cox, in yet another administrative change. Applications were submitted but according to Cox, no one met the criteria the committee had established.

According to Lennahan, President Murray was not too happy on the position in the first place, having cited a number of instances where an Internship Director did not work out well. President Murray was in Washington most of last week and unavailable for comment. As a result of the two fruitless searches, the Administration decided to scrap the entire proposal and have in its place, submitted a proposal to Washington for the improvements will go toward defraying the cost of the computer center. They are still awaiting word on this proposal.

Lennahan is upset over the administration’s decision. Murray said it was an unfortunate break for the students. It would be good for the college to formalize a policy on institutional and college internships now rather than at a later date.

Lennahan also stated that placing students in internships often leads the students to better opportunities later on. “A Director who continues on (page 6)

Program Announced

By Karen Plahbert

Dr. Louis Zacarello, academic vice president, has announced that at least after the bachelor of science degrees in biology, chemistry and environmental sciences. These degrees, available this semester, replace the bachelor of arts degrees the college previously offered in these fields.

There will be no faculty changes or major changes in the department, according to Dr. George Hooper, chairman of the division of natural science.

“The bachelor of science is a degree that other liberal arts including the Marist sciences says, ‘And there is really not much difference between the bachelor of arts and sciences."

“The bachelor of science seems to be more in tune with the preferences of employers, implying better training in science and more courses in applied areas rather than liberal arts,” he continues.

The bachelor of arts degrees require 90 credits in liberal arts with 30 credits allowed for applied science courses. The bachelor of science requires only 40 credits in liberal arts, allowing 60 credits for applied or other courses.

The new degrees, which were recently approved by the state after an application made last semester, result from “stimulus generated by students, parents and faculty,” states Hooper. The change could affect 30 to 45 graduating seniors, scoring two or more bachelor of science degrees at the end of the semester, according to Hooper.

Equipment returned

By David F. Metz

Radio broadcasting equipment purchased through the Communication Arts Department last summer, valued at approximately $9,000, had to be returned to the manufacturer over the winter intermission due to unexpected breakdowns. Says Sue Lawrence, who taught the Radio Broadcasting course in the fall semester.

The equipment consisting mainly of a Marinet Portable PA was returned to LBB Communications Company of Pennsylvania “under full guarantee.”

According to Lawrence, “It wasn’t really that bad. The year before, we spent $4,000-$5,000, you don’t expect your purchase to break down.”

Ed Mulvey, head of the Communication Arts Department, said that after thanking he “debugged” the entire system, a process Mulvey described as a problem in which every possible function of the equipment is checked for malfunction. For example, Mulvey found that Channel One and Channel Three of the seven channel console, and the monitor output were not working properly.

“Something as complicated as this doesn’t take much to break,” says Mulvey, “a bang here or a bump there and the whole system could break down.”

Although the equipment is back, Mulvey, who is teaching the Advanced Radio course this semester, is still going to be another two weeks before the console and other equipment would be back together again by his class. “I’ve got another freshman, and a junior, old work on the old console before it is operable again, said Mulvey.

Convocation day to be held February 20

By Joe Emmets

A panel presentation and discussion, moderated by Dr. Dennis Murray, president of Marist College, will be part of the convocation day to be held Wednesday, February 20 at 10 a.m. in the McCann Center.

The discussion will center around the meaning and future of a liberal arts education. Dr. Richard LaPietra of the Company of Pennsylvania/under full LPB console unit, was returned to the department last summer, valued at approximately $5,000, had to be returned to the manufacturer.

The discussion will be held in the context of the history and tradition of the college and what “makes it different by examining the future of Marist College. Ryan will end the discussion by examining the future of Marist College.

A few suggestions

Last week the Circle ran an article stating that the bookstore has been experiencing difficulties in the past few weeks regarding the placing and distribution of books needed for many courses this semester.

We have all been through the struggle of having to wait for our textbooks on time or at all. We all fall prey to the same temptation of buying a book at the last minute only to find out that it is not available.

Each year the students are forced to wait for months to receive their textbooks, often forcing them to purchase them late in the semester or even during the summer. We are not sure if this is the best solution that has occurred over the years or in the semester past.

One of the suggestions being made is to perhaps make a suggestion for a similar system that would possibly work in the long run, benefit the students, and be more efficient.

Some suggestions to help alleviate these problems could possibly be:

1. A suggestion to have students return their textbooks at the end of the semester.
2. A suggestion to have the bookstore order books in advance of the semester.
3. A suggestion to have the bookstore use a computerized system to track the availability of textbooks.

Exchange program

By Kenneth French

A possible exchange program combining students and faculty with study and work opportunities in foreign countries is being proposed by the student government. The program would allow students and faculty to participate in study and work programs in foreign countries.

The program would allow students and faculty to participate in study and work programs in foreign countries. The program would be open to all students and faculty, regardless of their major or minor.

New board member named

John E. Tenet, vice president in charge of the research environment and safety department for Texaco Inc., has been named a trustee of Marist College board of trustees.

Lee S. Malingoff, director of the Marist Center for International Environment Forum, has been named a trustee of Marist College board of trustees."
The Marist men's basketball team raised its overall record to 9-14 last week as it defeated Pratt and Sacred Heart, but Siena - the fifth and final Division I team Marist trailed by only one point with just under 7 minutes remaining after a jump shot by Tom Crotty. The Red Foxes then fought our way back. I think we compare the tempo. However that was the closest team's play in the second half and noted for him."

The Red Foxes, however, chipped away at the lead and trailed 42-32 at halftime. "We started out really slow and the shots just weren't falling in the first half" says Petro. He cited a shot at the end of the half by Smith that would have narrowed the lead to 20. "Steve will hit that shot in percent of the time, but it just wouldn't go for him."

Petro says he was pleased with the team's ability to "get back to Crotty a fantastic job on Mike Crotty" who the Red Foxes were trying to game steal. "I think we fought our way back. I think we compare the tempo. However that was the closest team's play in the second half and noted for him."

Last Saturday Marist took on Sacred Heart University, a team that the Red Foxes hadn't beaten in 12 tries, and downed them 86-40. Smith led the way for Marist with 22 points, followed by Rufus Cooper and DeWinne's 22 points and 12 rebounds.

Olympic preview

The Winter Olympic Games, a quadrennial display of amateur athletic talent from all over the world, are upon us once again. The United States participated in both the Summer and Winter Games in Moscow will be out of the picture for the near future. However, they will be on display at the games and noted for him."

Many exciting moments highlight the memory of past Winter Olympics. There were the great performances of Peggy Fleming and Dorothy Hamill as they won gold medals in both the Summer and Winter Olympics.
